# SUMMARY FOR POLICYMAKERS

## THE ACTION AGENDA: HIGH AMBITIONS, MUCH INITIATIVE AND CREATIVITY IN SOCIETY

In order to halt the loss of biodiversity in the Netherlands and worldwide, ambitious and binding targets must be set during the Biodiversity Summit (CBD CoP15), 'a new deal for Nature and People'. But setting targets is not enough, greater effort, decisiveness and broad social engagement are required - 'a whole of society approach'. The Dutch action agenda for biodiversity constitutes an important building block for the Netherlands to achieve the targets.

This action agenda provides an overview of pledges by Dutch companies, civil society organisations, knowledge institutions, local authorities and citizens regarding how they are going to contribute to the worldwide biodiversity targets. The action agenda was developed through a collaboration involving IUCN NL, the Deltaplan for Biodiversity Restoration and MVO Nederland, with financial support from the Ministry of Agriculture, Nature and Food Quality (LNV).

### Action Agenda Conclusions

- Biodiversity is alive! In society there are many initiatives and ambitions to halt biodiversity loss and restore biodiversity by 2030. The action agenda contains 152 pledges by organisations from diverse parts of society: companies, NGOs, youth, citizen initiatives, knowledge institutions, local authorities (provinces, municipalities, water boards). And there are undoubtedly many more.
- The business community in the Netherlands is increasingly demonstrating broader recognition of the importance of biodiversity for a healthy economy and society, and is striving for 'biodiversity gains'. Over half of the pledges have been submitted by companies, with a large share from the agricultural and financial sectors.
- Citizen initiatives, in which people collectively roll up their sleeves to create an appealing and green living environment are flourishing.
- Young people are working to ensure a liveable, biodiverse future, by increasing the awareness and involvement of their peers, by standing up for their future and making their voices heard in the political debate.
- Over the coming years, nature organisations will focus on conserving and restoring biodiversity in and outside of protected areas, expanding nature acreage and helping achieve ambitious and decisive nature governances.
- Strengths are being bundled in joint initiatives, such as the Deltaplan for Biodiversity Restoration, various company coalitions from MVO Nederland and the DNB Sustainable Finance Platform Biodiversity working group.
- The action agenda makes a balanced contribution to a broad range of targets: conserving and restoring biodiversity, reducing threats and promoting the sustainable use of biodiversity, capacity and knowledge building, awareness, and financing.
- The information available on quantitative ambitions established a 2030 target of biodiversity restoration of 400,000 hectares in the Netherlands and one million hectares outside of the Netherlands. With regard to species recovery the figure is 50 species in the Netherlands and 500 outside the Netherlands.

- However, if the 2030 targets are to be met, more needs to be done. Although a good number of organisations have submitted pledges and ambitions, which make a substantial contribution to nature and biodiversity, this is far from enough. Government and social actors will still have to make considerable joint efforts to get many more organisations on board. A proactive role by government is crucial to achieve this. The intended results will also have to be monitored and secured.

## THE GOVERNMENT'S ROLE AND CONTRIBUTION: OBLIGE, CONNECT, STIMULATE AND SUPPORT

### Urgent need for greater decisiveness

- Central government can support the bottom-up energy and commitment from society with regulations and incentives. Entrepreneurs and civil society need long-term certainty and a government that provides strong frameworks and a vision for the future. To this end the agenda's initiators propose a dialogue with the government.
- The Deltaplan for Biodiversity Restoration, a cross-sector collaboration, is well positioned to promote the interaction between the government and area-based initiatives.
- MVO Nederland is ideally placed to support the business community in their transition to a nature-inclusive business model.
- IUCN NL, the Dutch National Committee of the IUCN, provides a valuable network of knowledge. IUCN is the worldwide authority on nature conservation. The organisation bundles the experience, knowledge and network of 1,100 governments, NGOs, knowledge institutions and over 17,000 experts.
- IUCN NL, the Deltaplan for Biodiversity Restoration and MVO Nederland will use their expertise and networks to help achieve the action agenda's ambitions. Given the extent of the problem, close cooperation with the government is crucial.
- A vital aspect of the 'whole of society approach' is that the policy ambitions of the authorities and the bottom-up initiatives of society are aligned and mutually reinforcing. Active support for the action agenda will help achieve this.
- Policies of the new government must provide the necessary scope. There are opportunities in virtually all policy domains of central government.
  - Nature policy:
    - 'Programma Natuur', in particular the Nature-inclusive pillar yet to be developed
    - Policy to increase and connect protected areas (Updating N2000 targets) and surrounding buffer zones
    - Species policy, especially outside of nature reserves
    - Accelerating and scaling up 'Nature-based Solutions' (NbS), including in policy and investments in climate adaptation - and mitigation, and (natural) disaster reduction
  - Economic policy
    - Post-Covid-19 recovery: acceleration to a green economy with new, green earning models
    - Circular economy, including the sustainable and ecologically responsible use of biomass
    - Foreign trade and investments: accelerated reduction of our large ecological footprint and the destruction of ecosystems elsewhere

- Agricultural policy: accelerated shift to nature-inclusive agriculture and a minimum international ecological footprint (with no deforestation)
- Nitrogen policy: major reduction in nitrogen deposition by 2030, accelerated restoration of damage to nature by nitrogen deposition, additional nature to compensate for remaining emissions
- Climate policy: substantial contribution by nature to CO2 storage and buffers for the unavoidable effects of climate change (cooling, water storage)
- Urban and housing policy: a healthy and high-quality living environment for all
- Spatial policy: sustainable regional development in harmony with local and regional ecological processes (water cycles, soil health, connected nature)
- Development cooperation: support for inclusive, sustainable development in low and middle-income countries, equal access to natural resources and improving human rights for a healthy living environment

#### Recommendations related to what the government could do

All initiatives by non-state actors in the Dutch Action Agenda for Biodiversity will benefit from a proactive role by the government that not only connects with the initiatives but ensures scaling up and acceleration through obliging, stimulating and supporting.

- Obliging and connecting (legislation and regulation)
  - Translate the new international agreements (the CBD post-2020 agenda to be established, the European Biodiversity Strategy 2030) into bold and ambitious national policy for biodiversity restoration. Fully integrate the 'whole of society approach' therein, involving the various key players in society who contribute to the action agenda. Make targets for biodiversity restoration legally binding.
  - Provide long-term certainty, develop clear frameworks and communicate a vision for the future. Set ambitious targets at the national level in line with international and European agreements, annual monitoring of the progress of targets.
  - Assess and evaluate existing and new regulations for impacts on biodiversity, ensure a government-wide and coherent approach across policy areas. Introduce legislation that stimulates biodiversity restoration and eliminates conflicting rules that form an obstacle.
- Stimulate and support (subsidies, knowledge, networks):
  - Subsidy for bottom-up initiatives in society and the business community to promote biodiversity
  - Remove perverse subsidies and credit schemes, such as subsidies that stimulate intensive agriculture, and replace them with those that promote sustainable farming and nature restoration
  - Set up an investment/guarantee fund for the transition to circular, nature-inclusive agriculture
  - Support for investments by companies in biodiversity-friendly measures
  - Stimulate the use of 'real prices' in the market, which include the impact on nature capital. For example, by making knowledge and assessment tools available.
  - Set a good example. Stimulate the market for nature-positive initiatives by the business community with the government as a 'launching customer' via government procurement

and tenders. All government procurement and tenders must not be allowed to exert any negative impact, and preferably be 'nature-positive'.

- Follow the IUCN Global Standard for Nature based Solutions in government investments and projects.
  - Promote transparency around the impact on natural capital by companies and institutions, (such as through the Netherlands implementation of the CSRD, due diligence legislation, criteria for business community instruments, Transparency Benchmark, making knowledge and tools available)
  - Develop financial mechanisms that take into account a longer payback period and the longer time scale of ecological processes.
- Other support
    - Organise specific support in the form of knowledge and expertise for companies (SMEs and large companies) and organisations. Provide an unambiguous point of contact for entrepreneurs, use existing infrastructure and stimulate the formation of networks and mutual learning.
    - Diplomacy: actively promote the importance of the conservation and restoration of biodiversity through diplomatic channels, including multilateral organisations. Make a powerful and proactive contribution to international policy development and become a frontrunner.
    - Reinforce biodiversity in foreign trade and development cooperation (FTDC) policy, including by mainstreaming NbS in policies on climate, food and water security.

# 1. INTRODUCTION TO THE ACTION AGENDA

In 2019, the authoritative IPBES report stated that biodiversity has declined by 60 percent over the past 50 years, and one million species are at risk of extinction in the coming decades. Ecosystems that support and feed us are in danger of capsizing because of the way we over-exploit nature. Despite efforts at the national and international level, biodiversity continues to decline. For example, none of the twenty Aichi Biodiversity Targets for 2020 agreed in 2010 have been met. In the Netherlands, 46 of the 52 ecosystems to be protected are in moderate to poor condition; more than half of the protected plant and animal species continue to decline.

Preparations and negotiations are now taking place for a new biodiversity agreement, the 'post-2020 Global Biodiversity Framework (GBF)', similar to the Paris Climate Agreement. It is the global agenda for halting and reversing the loss of biodiversity and thereby prevent large-scale extinction of species. The timing is critical: the widely held view is that, as with the climate, this will be the last 10-year agenda that can make a difference to turn the tide. It calls for an ambitious, widely-supported 2030 action agenda for 'nature and people', with efforts made by the whole of society. A 'whole society approach', with a strong involvement of non-state and sub-national actors: local and indigenous communities, businesses, civil society, citizens, municipalities and provinces. The Dutch government endorses the need to improve biodiversity in the Netherlands, Europe and worldwide, and encourages the involvement of the whole of society in this endeavour.

The Dutch Action Agenda for Biodiversity lists pledges by Dutch companies, civil society organisations, knowledge institutions, local authorities and citizens on how they will contribute to the 2030 global biodiversity targets. These contributions could focus on strengthening biodiversity within and outside the Netherlands. The Action Agenda strives for the following goals:

- 1) To demonstrate support, willingness and specific pledges by Dutch society to conserve and restore biodiversity
- 2) To inspire other organisations to contribute to biodiversity targets
- 3) To influence the Dutch government to raise the level of biodiversity ambitions and to achieve them
- 4) To share and contribute to the CBD action agenda internationally.

The action agenda was developed by a collaboration involving the Dutch National Committee of the IUCN (IUCN NL), the Deltaplan for Biodiversity Restoration and MVO Nederland, with financial support from the Ministry of Agriculture, Nature and Food Quality (LNV). The contribution across the financial sector was made by De Nederlandse Bank (DNB) Sustainable Finance Platform Biodiversity, in association with the Dutch signatories to the Finance for Biodiversity pledge.

## 2. THE ACTION AGENDA IN A NUTSHELL

Caribbean Netherlands

## 3. SELECTION OF PLEDGES AND CONTRIBUTIONS

We present a cross-section of pledges and contributions submitted by the various platforms and partners. They represent different categories of organisations and types of contributions to biodiversity conservation and restoration. An overview of all the organisations that have submitted a pledge can be found in the Annex, together with a link to the pledge.

### 3.1 CONTRIBUTIONS VIA IUCN NL

#### ABOUT IUCN NL

IUCN is an active partner in the development of the post-2020 CBD framework and advocates for a widely-supported action agenda. Achieving the reverse of biodiversity loss by 2030 requires the active involvement of the whole of society and IUCN is supporting this by setting up a platform to encourage and document 'Contributions for Nature' by non-state actors. IUCN NL, the Dutch National Committee of the IUCN, contributes to this by compiling the Dutch action agenda for biodiversity, together with the Delta Plan for Biodiversity Restoration and MVO Nederland.

IUCN NL is committed to the conservation and restoration of biodiversity in and outside the Netherlands, focusing on landscapes with unique biodiversity under threat in Asia, Africa, South America and Europe. Together with partners - government, nature organisations, companies, knowledge institutions - IUCN NL pursues the following goals:

1. Ensure ambitious Dutch policies for nature and biodiversity
2. Decrease the biodiversity footprint of the Dutch economy
3. Connect, protect, and restore nature for well-functioning landscapes
4. Strengthen natural resource governance by local and indigenous communities
5. Defend environmental rights of people and nature
6. Secure large-scale finance for conservation and restoration

"The restoration of biodiversity by 2030 can and must be achieved together with citizens, businesses, NGOs, knowledge institutions and government. The Dutch Action Agenda for Biodiversity demonstrates that all kinds of activities are emerging and flourishing in society and that there are plenty of opportunities here for concrete steps forward towards biodiversity restoration."

**Coenraad Krijger**  
Director of IUCN NL

All pledges submitted to IUCN NL can be consulted via [this link](#).

## SELECTION OF PLEDGES SUBMITTED TO IUCN NL

### Land van Ons

Description: The Land van Ons citizen initiative is a cooperative that buys agricultural land to restore biodiversity and the landscape. Anyone can participate by buying their share of square metres. A long-term cultivation and management plan is drawn up in consultation with the farmer. When land is purchased, we immediately stop using fertiliser, crop protection agents and monoculture and we look for new nature-inclusive solutions, such as strip cultivation, restoring hedges and ditches, deliberate cluttering, preventing soil compaction, fallow periods, plant and animal manure adapted to the specific location and soil, and we carry out research on biodiversity in conjunction with farming. The land is still used as farmland.

Ambitions: The aim of Land van Ons is to establish a new 'ecological network', but for *farmland*. A large buffer of responsibly used agricultural land, which should serve as the foundation of sustainable biodiversity. Making the landscape more resilient instead of degrading it. The target we are aiming for is 300,000 ha, constituting 15% of the Dutch agricultural land. Not a hard target, but an imaginative point on the horizon. Since its foundation in 2019, some 14,000 people in the Netherlands have already joined Land van Ons, which has purchased over 100 ha with the invested capital.

*Strip cultivation at Holtesch in Hooghalen, the first plot purchased by the citizen cooperative Land van Ons with the aim of promoting local biodiversity. Image by: Gerrit Jan Kamphuis*

### National Youth Council

Description: The National Youth Council coaches eight youth representatives, two of whom in the field of Biodiversity and Food, so that the voice of the youth is heard in national and international politics. Together with the Vroege Zaaiers (Early Sowers) Working Group, they collect the opinions and ideas of young people and then make their voices heard at the United Nations. They do this by giving guest lectures and workshops at schools, visiting events and organising activities.

**Ambitions:** The aim is to reach as many young people as possible to generate awareness on and involvement in biodiversity. We want to challenge young people to think about protecting species, and encourage them to take this into account in their daily choices. In addition, we want to ensure that the critical questions and concerns of the youth are heard in politics to remind policymakers that our future is in their hands.

*Eva Koffeman, UN Youth Representative for Biodiversity and Food, speaking at the Green Election Debate in Naturalis.*

## Wij.land

**Description:** Wij.land contributes to the restoration of ecological functions and biodiversity in the western peatlands. Together with farmers, nature organisations and entrepreneurs, we are working on a learning network in which the restoration of ecosystem functions is also rewarded. A healthy vital soil forms the basis for it all, and soil biology plays a key role in our work.

**Ambitions:** By 2030, we will have achieved a lasting, direct, positive impact on biodiversity on > 10,000 ha of farmland and an indirect positive impact (through reduced pressure on nature) on 15,000 ha of N2000 areas. The biodiversity, herb layer richness and number of insects in the grasslands have increased, soil biology has been strengthened and we have a working mechanism for rewarding contributions to biodiversity restoration and climate targets.

*Soil sampling at Van Schie dairy farm in Warmond*

## Waddenvereniging

**Description:** The Waddenvereniging is committed to the conservation, protection and sustainable management of the Wadden Sea as a nature reserve, and to ensuring that the Wadden region once again functions as a single coherent system, in which dikes form less of an obstacle to nature and closed estuaries become part of the Wadden system once more.

**Ambitions:** Our ambition is for closed off estuaries like the Lauwersmeer and the Amstelmeer to be reconnected to the Wadden Sea. The possibility of constructing an underwater barrier in the northern part of the Lauwersmeer is currently being considered. If salty seawater is allowed back into the Lauwersmeer, this smart 'salt barrier' can partially restore (estuarine) brackish nature, while the surrounding (southern) agricultural land remains under a freshwater regime as much as possible. When reinforcing dikes, we aim for softer transitions between salt/fresh and water/land in at least two places in the Wadden region, as now happens in the Eems and is also being considered in the Koehool - Lauwersmeer route. The aim of sand replenishment and new measures to address climate change is that they are nature positive.

*Sketch illustrating the salt barrier to restore brackish nature in Lauwersmeer. Source: 'Programme for a Rich Wadden Sea, Smartland'.*

## 3.2 CONTRIBUTIONS VIA THE DELTA PLAN FOR BIODIVERSITY RESTORATION

### ABOUT THE DELTA PLAN FOR BIODIVERSITY RESTORATION

Biodiversity is essential for maintaining ecosystems and thus a healthy living environment. Nature and environmental organisations, farmers, scientists, businesses, citizens and citizens' organisations and (local) governments are increasingly aware of this problem and have joined forces in [the Delta Plan for Biodiversity Restoration](#). The Delta Plan's ambition is to reverse the loss of biodiversity in the Netherlands and restore biodiversity by 2030. The Delta Plan is a growing social movement. There are now more than 100 parties that have joined as partners and more than 70 parties that joined as supporters.

The core of the Delta Plan's approach is twofold. On the one hand, we are working to (further) develop a social movement of parties committed to biodiversity restoration. On the other hand, we are committed to a system change in which cooperation between all relevant actors is achieved at the area-specific level. Our aim is to stimulate, inspire and value land users for efforts that contribute to biodiversity. To this end, we explicitly cooperate with governments at the local, regional and national levels. Our approach is based on the principle of '[Act, learn, do better](#)'.

The Delta Plan defines [five factors for success](#) that make it possible for land users to contribute to biodiversity restoration. The five factors for success are: support and shared values, the realisation of new earning models, stimulating and coherent legislation and regulations, new knowledge, innovation and education, and area-specific cooperation between all land users in a region. Monitoring is also an important theme that the Delta Plan is working on to establish whether this approach actually leads to biodiversity restoration.

Parties who join the Delta Plan for Biodiversity Restoration as partners endorse the Delta Plan's ambitions and vision. They can participate in our working groups that strive to achieve the factors for success. In addition, we ask our partners to make a specific commitment that contributes to one or more of the Delta Plan's factors for success. Partners report annually on their progress regarding the implementation of their commitment.

This Dutch action agenda illustrates the Netherlands' contribution to international biodiversity targets. The Delta Plan for Biodiversity Restoration is happy to contribute to the action agenda because we have a series of specific activities to which all our partners have contributed through their commitments in the spirit of the Delta Plan. The Delta Plan is happy to contribute the commitments of its partners to the Dutch action agenda. We hope that this contribution of the work by our partners will provide a good idea of what is already happening in the Netherlands in terms of biodiversity restoration and will inspire others to also make a contribution. All the activities contributed by the Delta Plan increase the chances of achieving international biodiversity targets.

## SELECTION OF PLEDGES FROM PARTNERS OF THE DELTA PLAN FOR BIODIVERSITY RESTORATION

### Hollands Noorderkwartier District Water Board

Description: Every day, Hollands Noorderkwartier District Water Board works to protect the country from water, from flooding and water shortages, to provide clean and healthy surface water and safe (sailing) routes. Biodiversity is explicitly included in our council programme 'Working Together on the Future 2019-2023'. In this vision, the core objective is 'to contribute to rich biodiversity in the management area and a future-proof living environment'. On the theme of biodiversity, we work in an area-specific manner, in close cooperation with our stakeholders.

Ambitions: Here is a selection of our activities:

- We make use of riverbank space in the water system by allowing more vegetation to grow along the banks where possible. By doing so, we stimulate biodiversity and set an example for other land users.
- In the period 2021 - 2027 we will construct 80 km of nature-friendly riverbanks and manage over 350 km of nature-friendly riverbanks. We also manage, maintain and monitor 40 km of biodiverse, sown (regional) flood defences.
- In 2021, we will start a pilot project in the Uitgeester and Heemskerker Broekpolder to perform an inventory of how nature and biodiversity can be strengthened as much as possible through the optimal cooperation of stakeholders.
- We deploy soil coaches to help farmers restore soil biodiversity and thus its ability to retain water and nutrients.

© *Natuurmonumenten*

## Utrecht University

**Description:** Utrecht University operates at the very heart of society and works on sustainable solutions to societal issues. One strategic theme is 'Pathways to Sustainability', in which education and research reinforce one another to achieve a sustainable society. Conserving and restoring biodiversity is a key part of this. Utrecht University conducts research into the conservation and restoration of biodiversity, in the Netherlands as well as in other parts of the world. Research is increasingly multidisciplinary and transdisciplinary, cooperating with relevant actors in society to anchor the application of knowledge in society.

**Ambitions:** We strengthen and restore biodiversity together with our surroundings. Research groups within the Department of Biology, the Copernicus Institute for Sustainable Development, Faculty of Veterinary Medicine and Botanic Gardens incorporate the aims of the Delta Plan for Biodiversity Restoration in their teaching and research and share knowledge with society. We educate students who possess knowledge of biodiversity loss and the possibilities for restoration. In doing so, we create support and shared values among future generations of ecologists, environmental scientists, public administrators and veterinarians. In our business operations, 'practice what you teach' also applies: we are working on restoring biodiversity at Utrecht Science Park as part of multi-year site management, strengthening the connection with the surrounding landscape.

## Province of Drenthe

**Description:** The Province of Drenthe aims to promote biodiversity both in the 'dark green' nature areas (Natura 2000 areas and Nature Network Netherlands) and in rural areas (agricultural areas, public spaces). This is consistent with the focal areas of the Delta Plan for Biodiversity Restoration.

**Ambitions:** Within the approach to nature, it is relevant that we fulfil the agreements made with central government in the [Natuurpact \(Nature Pact\)](#). For this purpose, the [Natuurlijk Platteland \(natural countryside\) programme](#) was established. There are several aspects in the approach to the agricultural area. The most appealing are the implementation of the nature and landscape system (SNL) through

Heath landscape in the province of Drenthe © Park Vakanties

[Verge Management](#) has been developed. Finally, as a province, we promote support for biodiversity. For example, we have developed a farmland and meadow birds teaching package and we have a 'Green residents' initiative' scheme that enables residents to make their living environment greener.

agricultural nature management and work on innovative, modern and sustainable agriculture. The Drenthe Sustainable Dairy Farming programme has been set up for dairy farming. The emphasis in the public space approach is on strengthening ecological management. To this end, we work with, among others, municipalities and water boards in the so-called 'Bermberaad' (Verge Consultation). A body in which parties inspire each other to achieve more effective ecological roadside verge management. One example is that a [Network map for Drenthe](#)

## LandschappenNL

**Description:** LandschappenNL serves the interests of the provincial Landschappen and the provincial Landschapsbeheer foundations at the supra-provincial, inter-provincial and national level. The provincial organisations represent over 75,000 volunteers, 110,000 hectares of protected nature, over 800 monuments and have a support base of around 310,000 donors.

**Ambitions:** Within the framework of the Delta Plan, we are working on intensifying and further scaling up cooperation with agriculture. Cooperation with the sector and with individual farmers aims to make nature-inclusive agriculture a success locally and to make the transition from farmland to nature reserves more gradual. We achieve this through leasing, joint planning in area-based approaches and through cooperation in the chain. We also invest in training and education, through joint participation in 'nature farming' courses by tenants and managers. We contribute (guest lectures) to greening education. Of course, we also invest in the quality of our own sites and the landscape in which we work. We are drawing up a sample of our management practice, indicating for each type of landscape/region where the main (biodiverse) bottlenecks are and how we will tackle them.

Natuurmonumenten © Geurt Besselink

### 3.3 CONTRIBUTIONS VIA MVO NEDERLAND

#### About MVO Nederland

As an entrepreneur, you want your business to continue. MVO Nederland is convinced that this is only possible in the new economy: climate neutral, circular, inclusive and with fair chains. Therefore, together with entrepreneurs, we are forming a movement towards this new economy. Our goal is for 20% of the economy to shift to the new economy. We aim to reach this tipping point in 2025. Because we want to reach this tipping point as soon as possible, we must expand our movement as much as we can now.

Together with our network of partners, we work every day on achieving this new economy. Our role is to show what the route to the new economy looks like. We support this by bringing about innovation through projects with unexpected collaborations. And with governments and financiers we create the conditions that simplify and accelerate the achievement of our goal.

"Natural resources such as soil, water, air and biodiversity form the core of our existence. As an entrepreneur, you make use of this natural capital, which means you also have the opportunity to contribute to conserving the value this capital provides. For the transition to the new economy, integrating these resources into business operations is essential. In the end, that makes your business and nature future-proof."

**Maria van der Heijden**  
Managing Director MVO Nederland

Read more about MVO Nederland's activities at [www.mvonederland.nl](http://www.mvonederland.nl)

## Social programme Natural capital and Dutch support Business for Nature 'Call to action'

MVO Nederland's *Natural Capital social programme* is a programme that accelerates sustainable use of natural capital by SMEs and large companies. For this purpose, we set up sectoral and cross-sectoral innovation projects, including in Agrifood, Construction and Chemistry. Then we scale up the results with relevant parties. The aim is to achieve integral positive results for biodiversity, soil, water and climate. Both in the food chain and in geographical areas. To this end, we provide practical resources and handy tools so that companies can effectively get started.

Concrete action is needed in order to reverse biodiversity loss, so that our economy and society can continue to flourish. Businesses have a key role to play in this regard, but the Dutch government and international community must establish the frameworks and rules of the game that make it easier for entrepreneurs to contribute to biodiversity. That is why MVO Nederland, as part of the Natural Capital programme and in association with Business for Nature and IUCN NL, has united as many entrepreneurs as possible in a call for ambitious biodiversity targets in 2021. This '[Call to Action](#)' has been signed by more than one hundred Dutch companies. These companies endorse the following key points on biodiversity:

1. Healthy societies, resilient economies and thriving businesses depend on nature.
2. Governments must now adopt policies to halt the loss of nature and restore it in this decade.
3. Together, let us protect, restore and sustainably use our natural resources.

**A NUMBER OF EXAMPLES OF COALITIONS AND INDIVIDUAL COMPANIES THAT DEMONSTRATE THEIR COMMITMENT TO THESE KEY POINTS IN PRACTICE ARE HIGHLIGHTED BELOW. THEY HAVE AMBITIONS FOR THE FUTURE FOR WHICH THEY ARE TAKING ACTION. WITH THEM, A TOTAL OF 104 DUTCH COMPANIES HAVE SIGNED THE 'CALL TO ACTION' FOR AN AMBITIOUS INTERNATIONAL BIODIVERSITY AGREEMENT (SEE ANNEX).**

## SELECTION OF PLEDGES SUBMITTED TO MVO NEDERLAND

### Groene Netten

**Description:** Groene Netten is a collaboration between MVO Nederland and eight major infrastructure managers in the Netherlands. Alliander, Gasunie, KPN, ProRail, Rijkswaterstaat, Stedin and TenneT, partners in Groene Netten, collectively manage an infrastructure network covering 922 square kilometres in urban and rural areas - more than the Veluwe and a quarter of the country's land-based nature - with a major potential impact on biodiversity restoration. Together with the Dutch Butterfly Conservation, Groene Netten developed the Main Ecological Infrastructure (EHI). We have mapped the joint acreage for the EHI and with this knowledge we are exploring where cooperation and scaling up are possible. This creates a unique opportunity to work together nationwide on restoring biodiversity: our infrastructure network no longer just connects people, but also Dutch flora and fauna!

**Ambitions:** By 2030, we, the partners of Groene Netten, want to make maximum use of our area for biodiversity restoration. Our dream is to use three quarters of our area for biodiversity restoration - almost 750 km<sup>2</sup>. In the meantime, sine mowing has been introduced at TenneT and Alliander, and Stedin is conducting pilots of the approach. In association with Naturalis, we are identifying the areas where we can exert the greatest impact. The fact that biodiversity can recover quickly has been demonstrated by TenneT and Alliander at high-voltage substations, among other places: thanks to sine mowing and other vegetation, the insect population has increased by fifty to seventy percent!

*Through careful green management, for example around high-voltage substations, the Groene Netten Coalition can make an important contribution to restoring biodiversity in the Netherlands.*

Read more about Groene Netten on [www.natuurlijkkapitaal.nl](http://www.natuurlijkkapitaal.nl)

### Futureproof Coffee Collective

**Description:** The Futureproof Coffee Collective (FCC) is a collaboration involving 28 coffee companies from the SME sector. They strive for the 'true price' of coffee. With the help of 'True Cost Accounting', the FCC has developed a tool to identify the hidden costs of coffee production. The tool calculates the cost for one kilo of coffee based on five themes: living income, soil quality, water, CO<sub>2</sub> and biodiversity. Coffee

companies and producer groups can use the results provided by the tool to work towards reducing hidden costs. In other words: to work on making a positive impact.

Ambitions: it is estimated that by 2050, climate change will have rendered 50% of the areas in which coffee can be grown unsuitable.<sup>1</sup> Promoting biodiversity is an important linchpin within climate change mitigation and adaptation strategies. This is why the FCC has placed biodiversity high on its agenda. By reducing production costs and paying farmers a better price for their coffee, more can be invested in nature-inclusive agriculture. Moyee Coffee and Peeze are partners of the FCC and have already individually signed the action agenda for biodiversity. As a collective, the FCC is currently working on expanding biodiversity and water pollution as themes within the True Cost Accounting tool. In addition, the FCC is actively promoting agroforestry initiatives within the network. For example, a consortium of companies is expected to start a joint project in Uganda in September 2021, focusing on biodiversity.

*By reducing production costs and paying farmers a better price for their coffee, more can be invested in nature-inclusive agriculture.*

Read more about the Futureproof Coffee Collective at [www.natuurlijkkapitaal.nl](http://www.natuurlijkkapitaal.nl)

### **Yassasree B.V. (GVK Society)**

Description: Yassasree B.V. works closely with the Grameena Vikas Kendram Society for Rural Development (GVK) Society - a local Indian NGO. Yassasree B.V. is working with farmers in South India on

---

<sup>1</sup> Bunn, C., Läderach, P., Ovalle-Rivera, O., & Kirschke D. (2015) A bitter cup: climate change profile of global production of Arabica and Robustica coffee

*Besides supporting sustainable agriculture, Yassasree BV also wants to contribute to better living conditions in other areas, such as better access to healthcare facilities and education for girls and women.*

the transition from polluting and resource-intensive agriculture to regenerative (restorative) agriculture. The social enterprise trains farmers in regenerative, innovative farming techniques, such as mixed cultivation and making natural crop protection agents. Together with GVK Society, Yassasree B.V. unites farmers in cooperatives in order to process and market the organic raw materials at a fair price. To this end, it organises the pre-investment required for organic and regenerative certification. It works with the GVK Society to contribute to resilient ecosystems - driven by future-proof business models - a prerequisite for a sustainable source of income for rural communities.

**Ambitions:** GVK Society wants to make farmers the most important part of the chain again. The organisation sees the farmer as a *steward* when it comes to natural capital: if he does things differently, this has a direct impact on nature, biodiversity and health in the environment and the chain. In India, as much as 70% of the population depends on agriculture, most of whom are small-scale farmers. GVK Society therefore aims to broaden and deepen its relationships with rural communities: the organisation wants to work with even more farmers (broaden) and in the communities where it is already active not only to help make agriculture more sustainable, but also to contribute to better living conditions in other areas (deepen). Examples include better access to healthcare facilities and education, especially for girls and women.

## Corbion

### Description

Corbion is a Dutch food and biochemistry company that has been active in the production of lactic acid and lactic acid derivatives for more than 100 years and is the world market leader in its field. Corbion applies this experience to create sustainable solutions that help preserve food, health and the planet. Sustainability is integrated in Corbion's goals and biodiversity plays a key role. A specific example of action the company is undertaking is the cultivation of algae as an alternative to fish oil. Fish oil is widely used in fish feed for the production of farmed fish. Corbion's algae-based AlgaPrime DHA offers an alternative, which helps prevent overfishing. Corbion has long used sugars as a raw material for the production of lactic acid and also uses it for the production of algae ingredients. To reduce the impact on biodiversity in agriculture, the company works with farmers and experiments with regenerative farming techniques to improve soil health.

### Ambition

Corbion's ambition is to increase its positive impact and reduce its negative impact. Biodiversity is very important and the company promotes it by aligning its activities with the SDGs. In doing so, Corbion focuses on preserving what really matters: the world around us.

### 3.4. CONTRIBUTIONS FROM DUTCH FINANCIAL INSTITUTIONS

#### Finance for Biodiversity pledge endorsement

Web link <https://www.financeforbiodiversity.org>

On 25 September 2020, a group of 26 financial institutions from around the world launched the 'Finance for Biodiversity Pledge'. They are calling on world leaders and committing to invest in biodiversity conservation and restoration in the run-up to the Biodiversity Summit (CBD CoP15) in Kunming. The number of signatories is now 55, 16 of which are Dutch financial institutions.

Dutch institutions affiliated (as of 30 June): ABN AMRO, Achmea, Actiam N.V., Aegon Nederland N.V., ASN Bank, a.s.r. Nederland, Coöperatieve Rabobank U.A., de Volksbank, Klaverblad Verzekeringen, NN Investment Partners, NWB Bank, Pymwymic Investment Management B.V., Robeco, Triodos Bank, Triple Jump, UFF African Agri Investments.

Under the Finance for Biodiversity Pledge, the Dutch financial institutions commit to the goals stated below.

We, 55 financial institutions, representing over EURO 9 trillion in assets, call on global leaders during the 15th meeting of the Conference of the Parties (COP 15) to the Convention on Biological Diversity (CBD) to agree on effective measures to reverse nature loss in this decade to ensure ecosystem resilience.

As financial institutions we know that healthy societies, resilient economies and thriving businesses rely on nature. Together let's protect, restore and sustainably manage our natural resources. We will make every effort to take our share of responsibility and contribute to the protection and restoration of biodiversity and ecosystems through our financing activities and investments.

We therefore commit to do the following by 2024 at the latest:

**1. Collaboration and knowledge sharing** We will collaborate and share knowledge on assessment methodologies, biodiversity-related metrics, targets and financing approaches for positive impact.

**2. Engaging with companies** We will incorporate criteria for biodiversity in our ESG policies, while engaging with companies to reduce their negative and increase positive impacts on biodiversity.

**3. Assessing impact** We will assess our financing activities and investments for significant positive and negative impacts on biodiversity and identify drivers of its loss.

**4. Setting targets** We will set and disclose targets based on the best available science to increase significant positive and reduce significant negative impacts on biodiversity.

**5. Reporting publicly** We will report annually and be transparent about the significant positive and negative contribution to global biodiversity goals linked to our financing activities and investments in our portfolios

## Joint initiatives

The Dutch financial institutions play a pioneering role in integrating biodiversity in their operations and investments, which is expressed in the following joint activities

### DNB Platform for Sustainable Financing Biodiversity Working Group

The loss of biodiversity and deforestation call for swift action. Also from the financial sector. Therefore, financial institutions of the Biodiversity Working Group under the DNB Platform for Sustainable Financing share their plans and provide examples related to biodiversity. The biodiversity working group consists of eleven financial institutions and two other organisations. Members of the working group are: ABN Amro, Actiam, APG, ASN Bank, a.s.r., FMO, ING, Kempen van Lanschot, Rabobank, Robeco and NWB Bank, Ministry of Agriculture, Nature and Food Quality and the Erasmus Platform for Sustainable Value Creation.

The working group's ambition is to increase knowledge of biodiversity within the financial sector. The working group does this by mutually exchanging knowledge as well as by actively disseminating knowledge to the broader financial sector. The working group aims to serve as a connecting link related to biodiversity in the Dutch financial sector. The working group hopes that by 2030, and in fact well before then, biodiversity will be a topic of daily concern within the primary processes of financial institutions.

### Engagement processes

Many Dutch investors recognise the risks of biodiversity loss and are trying to persuade the companies in which they invest to better anchor the causes of biodiversity loss in their policies. Dutch investors have initiated or are involved in several engagement processes. The Finance for Biodiversity pledge is currently working on a 'Nature Action 100' initiative, as an umbrella for the biodiversity-related engagement processes. Some of the current projects include the cooperation between ACTIAM and Satelligence, which uses satellite images of deforestation to call companies at various points in the value chain to account for their contribution to deforestation. From the Netherlands, ASR, Achmea Investment Management (Achmea IM), Aegon, Robeco and ING are involved. Achmea IM recently launched a process to encourage companies in the agricultural and food chain to set biodiversity targets. The Dutch Association of Insurers, a.s.r., ACTIAM, Achmea, Aegon, NN Group and NN Investment Partners, among others, are working together to reduce deforestation in the soy chain and encourage food producers to use alternative protein products. In addition, PRI, Fairr and Ceres are running several projects focused on deforestation in the soft commodity chains, in which Dutch investors are involved. Finally, Robeco, together with other investors, is engaging with the Brazilian government to take deforestation seriously at government level. Many engagement processes focus on deforestation and the sustainable production of soft commodities. Some projects focus on the system transition to plant proteins or the use of crop protection agents. Both primary producers and companies further down the chain are included in all the projects.

### Platform for Biodiversity Accounting Financials (PBAF)

The economic activities associated with loans and investments by financial institutions can have a significant impact on biodiversity and may depend on the ecosystem services supported by biodiversity. The focus on determining this impact and dependency is growing rapidly, both nationally and internationally. At the end of 2019, six Dutch financial institutions (ASN Bank, Actiam, FMO, Robeco, Triodos bank and Triple Jump) took the initiative to set up the Platform for Biodiversity Accounting Financials (PBAF). Building on the success of the Platform for Carbon Accounting Financials (PCAF), this platform is developing an international standard on impact & dependency assessment in the financial sector. This standard should ensure that the various methodologies in the market provide the right information that financial institutions can use to steer, with the ultimate goal (in addition to risk management and identifying opportunities) of the conservation and sustainable use of biodiversity. After all, having the right information at one's disposal is a prerequisite for achieving ambitions by 2030, such as a 'no-net-loss' or a 'net-gain'.

PBAF has now grown into an initiative with 25 financial institutions from six countries, including 17 financial institutions from the Netherlands: ABN Amro, Achmea IM, APG, ASN Bank, a.s.r. asset management, De Volksbank, FMO, NN Investment Partners, NWB Bank, PGGM, Pymwymic, Rabobank, Robeco, Triodos Bank, Triple Jump, UFF African Agri Investments and Van Lanschot Kempen. See [www.pbafglobal.com](http://www.pbafglobal.com).

#### Taskforce on Nature-related Financial Disclosures (TNFD)

The Taskforce on Nature-related Financial Disclosures (TNFD) aims to deliver a framework to assess nature-related risks and opportunities by 2023. Organisations can use this framework to report on and act upon nature-related risks and opportunities, with the aim of achieving a global shift in financial flows: from a negative to a positive impact on nature. Many global financial institutions and MNCs have endorsed the TNFD and since September 2020, the Informal Working Group of 74 members (including Rabobank and Robeco from the Netherlands) has been working on the scope and work plan. Starting in 2021, a 30-member task force from the business community, with representation from the financial and 'real' economy, will develop the TNFD framework, drawing on existing well-functioning initiatives and standards. TNFD will test and refine the framework in 2022 before it is launched and disseminated in 2023, ensuring that the framework for nature-related reporting is an accessible resource known to all stakeholders.

## CONCLUSIONS

The overview and analysis of all the pledges, the contributions and ambitions presented, supplemented with findings from [previous research on Dutch non-state initiatives](#) lead to the following conclusions.

- The biodiversity issue is alive! There are many initiatives and ambitions in society to halt biodiversity loss and restore biodiversity by 2030 (read more about this in the report: '[Dutch non-state actor contributions to biodiversity](#)'). The action agenda contains 152 pledges by organisations from diverse parts of society: companies, NGOs, young people, citizen initiatives, knowledge institutions, local authorities (provinces, municipalities, water boards). And there are undoubtedly many more.
- The business community in the Netherlands is increasingly demonstrating broader recognition of the importance of biodiversity for a healthy economy and society, and is striving for 'biodiversity gains'. Over half of the pledges have been submitted by companies, with a large share from the agricultural and financial sectors.
- Citizen initiatives, in which people collectively roll up their sleeves to create an appealing and green living environment are flourishing.
- Young people are working to ensure a liveable, biodiverse future, by increasing the awareness and involvement of their peers, by standing up for their future and making their voices heard in the political debate.
- Over the coming years, nature organisations will focus on conserving and restoring biodiversity in and outside protected areas, expanding nature acreage, and helping achieve ambitious and decisive nature governance.
- Strengths are being bundled in joint initiatives, such as the Deltaplan for Biodiversity Restoration, various company coalitions from MVO Nederland and the DNB Sustainable Finance Platform biodiversity working group.
- The action agenda makes a balanced contribution to a broad range of targets: conserving and restoring biodiversity, reducing threats and promoting the sustainable use of biodiversity, capacity and knowledge building, awareness, and financing.
- The information available on quantitative ambitions established a 2030 target of biodiversity restoration of 400,000 hectares in the Netherlands and one million hectares outside of the Netherlands. With regard to species recovery the figure is 50 species in the Netherlands and 500 outside the Netherlands.
- However, if the 2030 targets are to be met, more needs to be done. Although a good number of organisations have submitted pledges and ambitions, which make a substantial contribution to nature and biodiversity, this is far from enough. Government and social actors will still have to make considerable joint efforts to get many more organisations on board. A proactive role by government is crucial to achieve this. The intended results will also have to be monitored and secured.

## ANNEX - Overview of all organisations that have made a pledge or signed the BFN call to action

## **The Dutch Action Agenda for Biodiversity: pledges by non-state actors to the 2030 CBD targets**

© Dutch National Committee of the IUCN (IUCN NL)

Amsterdam, August 2021

### **Authors**

Maxime Eiselin, Carl Königel and Henk Simons (IUCN NL), Judy Koppenjan (Delta Plan for Biodiversity Restoration), Erwin van Overbeek and Sanne Swinkels (MVO Nederland)

### **Graphic design**

Daphne van den Heuvel (IUCN NL)

### **With thanks to**

The DNB working group on biodiversity for its contribution on the financial sector and all organisations that submitted a pledge to the action agenda.

### **Citations**
